<b>Description of Defect, how it came to light, and possible consequences if ignored.</b>	The spring used to lock the seat rail in its adjusting positions could break if the seat is adjusted forward and/or rearward with high frequency. If this occurs, the seat may not be able to be locked in position. In limited circumstances, the broken spring could become stuck in the seat rail, and the seat might appear to be locked in position. If the vehicle is operated with a broken seat rail spring, the seat could move in the event of a crash, increasing the injury to the occupant.
