Description of Defect, how it came to light, and possible consequences if ignored.	Due to a production variance on the part of the supplier, a certain batch of screws/bolts for fastening the steering gear at the front crossmember may not correspond to the specificationmay regarding their service life. If the affected screws/bolts have been installed on a vehicle, these may break during the service life of the vehicle if they are exposed to high loads combined with vibrations. Should one of the two screws/bolts at the crossmember break, the driver will become aware of this by perceptible noises while driving, a possibly inclined steering wheel position or the sporadic activation of the ESP warning lamp. In case of a broken screw/bolt, the driving characteristics of the vehicle would be impaired, whereby the risk of a potential accident can increase.
Remedial Action	Replace the screws/bolts of the steering gear on affected vehicle as a precautionary measure.
