Description of Defect, how it came to light, and possible consequences if ignored.	In isolated cases, a synchronization loss of the fuel pump and the fuel system control unit may occur due to software issue, as a result of which the combustion engine fails to start and the output of the electric motor is then also no longer available. In this case, the vehicle becoming immobile cannot be ruled out. Depending on the circumstances in the individual case, this can result in an increased risk of accident. After a restart, which is possible at any time, the entire system performance is once again available.
