Affected Vehicle Identification Number (VIN)	List as below:
Description of Defect, how it came to light, and possible consequences if ignored.	The regulator/rectifier power module circuit board may have absorbed moisture under high humidity conditions, reducing the strength of the adhesive used to affix the circuit board to the aluminum case. Due to insufficient adhesion, heat generated by the power module circuit board can cause the circuit board to deform and lift off the case, in turn causing excessive heat on the circuit board and uncontrolled electric current output, which may be resulted in insufficient charging current being provided to the motorcycle battery. This can cause discharge of the battery and can lead to engine stalling and/or a no-start condition.
