Description of Defect, how it came to light, and possible consequences if ignored.	It is related to the curtain shield air bags located in the left and right side roof rails. Each curtain shield air bag uses a "hybrid" type inflator which could have a crack in the weld area. If the crack propagates over time, the welded portion could separate. If an inflator separates, it results in partial inflation of the curtain shield air bag. In limited circumstances, one or both sections of the inflator could enter the interior of the vehicle.
Remedial Action	Install retention brackets on the curtain shield air bag inflators
