Description of Defect, how it came to light, and possible consequences if ignored.	Electrical grounding of the steering column may be insufficient in affected vehicle. It is possible that, in combination with internal damage to the connections in the steering column switch module, the driver airbag could be triggered without obvious cause due to electrostatic discharge because of this. This may result in a risk of injury for the driver along with an increase in the risk of an accident. An airbag warning message in the instrument cluster as well as the red airbag indicator lamp display the presence of damage to the connections in the steering column switch module to the driver before the driver airbag is triggered without obvious cause.
Remedial Action	Establish sufficient grounding for the steering column on affected vehicle as a precautionary measure.
