<b>Description of Defect, how it came to light, and possible consequences if ignored.</b>	The subject vehicles are equipped with a door lock system containing a latch, pawl, and rubber stopper for noise prevention. During the door lock assembly process for the front driver and passenger doors, there is a possibility that the rubber stopper between the latch and pawl could have been installed in the incorrect position. If this occurs, after repeated opening and closing of the door over time, the rubber stopper could interrupt the door lock system, resulting in the door lock not properly latching. In this condition, the door could open while driving, increasing the risk of injury to a vehicle occupant.
<b>Remedial Action</b>	Replace the driver & front passenger door locks
