Description of Defect, how it came to light, and possible consequences if ignored.	The subject vehicles are equipped with front lower arms connecting the front wheels to the vehicle front cross member. Due to certain improper production conditions that occurred at the steel material supplier, a steel slab that was used to produce front lower arms may have had cracks on some portions of its surface. If a vehicle with an affected front lower arm(s) is driven frequently with rapid acceleration and deceleration over its lifetime, the cracks in the affected arms could propagate and the arm can eventually separate from the front wheel assembly. This may result in a loss of vehicle control and increase the risk of a crash.
Remedial Action	Replace the front suspension lower arms
