Description of Defect, how it came to light, and possible consequences if ignored.	In a hybrid system, since the power conversion module control board has insufficient resistance to electrical noise, the power supply control circuit may erroneously detect the electrical noise, generated by the voltage fluctuation of the high voltage circuit, as an abnormality and stop momentarily. Therefore, the power supply voltage may drop momentarily, the engine warning light may be turned on and a momentary power loss may occur.
Remedial Action	Replace the inverter
