Description of Defect, how it came to light, and possible consequences if ignored.	Due to the deformation of this sealer tape, a gap can form between the service hole cover and cowl louver, allowing water to drip into the engine compartment under heavy rain conditions and accumulate around the fuel injectors when the vehicle is parked at a certain incline. If this were to occur, the water could enter the cylinder bores causing damage to the connecting rods. This can result in abnormal noise during engine operation. Continued engine operation in this condition can lead to an engine stall. An engine stall while driving at higher speeds can increase the risk of a crash.
Remedial Action	Install cowl vent splash shield
