<b>Description of Defect, how it came to light, and possible consequences if ignored.</b>	The threaded connection of the 48V ground point under the right front passenger seat may be designed with too low a torque in certain vehicles. In this case, the cable lug of the ground line would not be correctly secured. Due to this, the electric transitional resistance at this connection may be increased. As a result, the temperature in this area may increase due to the high electrical currents that can flow through this connection. In this connection, a risk of thermal damage cannot be completely ruled out.
<b>Remedial Action</b>	As a precautionary measure, to check the threaded connection of the ground point in the affected vehicles and correct if necessary.
