Subject	Update Vehicle Firmware for Thermal Performance Improvement
Progress	Running
Affected Vehicle Identification Number (VIN)	List as below
Description of Defect, how it came to light, and possible consequences if ignored.	During fast-charging or preparation for fast-charging, the infotainment central processing unit ("CPU") may not cool sufficiently to prevent higher than expected temperatures, which may cause the CPU to slow processing or restart. Slower processing or restarted processing could cause the center screen display to lag or appear blank. A lagging or blank center screen display may cause the rearview camera display, windshield visibility control settings, drive modes (i.e., Drive, Neutral, or Reverse), and telltales to be unavailable, which may increase the risk of a collision.
Remedial Action	Tesla will provide firmware update that will improve the management of the CPU temperature and associated communications with elevated temperature operation. This remedy will mitigate temperature elevations in the CPU when the vehicle is fast-charging or preparing to fast-charge, which will prevent slow processing or restart.
