<b>Description of Defect, how it came to light, and possible consequences if ignored.</b>	<p>After extended time in the field and in conjunction with significant water exposure, this corrosion might lead to a leakage of the brake booster. In this case, the brake force support might be reduced, leading to an increase in the brake pedal forces required to decelerate the vehicle and/or to a potentially increased stopping distance. This may be accompanied by hissing or airflow noises when applying the brake.</p> <p>Additionally, in rare cases of very severe corrosion, it might be possible for a particularly strong or hard braking maneuver to cause a mechanical damage in the brake booster, whereby the connection between brake pedal and brake system would fail. In such a very rare case, it would not be possible to decelerate the vehicle via the service brake. Thus, the risk of a crash or injury would be increased. The function of the foot parking brake is not affected by this issue.</p>
<b>Remedial Action</b>	As a precautionary measure, to check the brake booster in the affected vehicles, depending on the result of this inspection,

	replace it where necessary.
