Description of Defect, how it came to light, and possible consequences if ignored.	<p>We have determined that on certain vehicles the bolting of the 48V ground connection in the engine compartment might be fastened with an insufficient torque. In this case, the cable lug of the ground line might not be fixed correctly. Subsequently, the electric resistance of the connection might increase. In combination with the high electrical currents potentially flowing through this connection, the temperature in this area might increase. As a consequence, a risk of thermal damage cannot be ruled out completely.</p>
Remedial Action	As a precautionary measure, to check the threaded connection of the ground point in the affected vehicles and correct this if necessary.
