Description of Defect, how it came to light, and possible consequences if ignored.	<p>We have determined that the transmission control unit software may not correspond to the specifications in certain vehicles. If a shift operation in the transmission from 7th to 6th gear were not completed correctly during a slight braking procedure, the engine may cut out in combination with other specific boundary conditions (in particular when the shift operation is aborted, low transmission oil temperature, simultaneous recuperation via the 48 V starter-alternator). In this case, the vehicle would have no traction until it was braked to a standstill and the engine was restarted. In this connection, the risk of an accident may be increased. This issue does not affect the vehicle's steering and brake systems.</p>
Remedial Action	As a precautionary measure, to update the transmission control unit software in the affected vehicles.
