Description of Defect, how it came to light, and possible consequences if ignored.	We have determined that the 48V ground connection under the passenger seat might have come loose. In this case, the cable lug of the ground line would not be secured correctly. Subsequently, the electric resistance of the connection might increase. In combination with the high electrical currents potentially flowing through this connection, the temperature in this area might increase. As a consequence, a risk of thermal damage cannot be ruled out completely.
Remedial Action	As a precautionary measure, to check the bolting of the ground connection on the affected vehicles and correct it if necessary.
