Description of Defect, how it came to light, and possible consequences if ignored.	As part of this constant monitoring, we have found that the screw connection between the electric line and the prefuse box in the front passenger footwell may unfortunately have been tightened with insufficient torque in certain vehicles. As a consequence, a sudden loss of propulsion cannot be ruled out. In addition, the electric transitional resistance at this connection may increase. In consequence, the temperature in this area may increase due to the high electrical currents that can flow through this connection, which may increase the risk of thermal damage.	
Remedial Action	As a precautionary measure, to check the screw connection of the prefuse box on the affected vehicles and carry out any necessary repair measures.
