Description of Defect, how it came to light, and possible consequences if ignored.	The subject vehicles are equipped with a front-view camera and a rearview camera used to capture and display an image of the area in front of and behind the vehicle. Due to insufficient laser welding of the camera case at the supplier during a specific production period, there is a possibility that the camera case may separate when exposed to external stress over time, allowing water to leak into the camera. If this occurs, the circuit inside the camera can short, leading to an inability to display an image of the area in front of and/or behind the vehicle.
Remedial Action	Inspect the front camera or replace it
