Description of Defect, how it came to light, and possible consequences if ignored.	Defect: Checking whether all specified threaded connections are installed on the axle bearing brackets. If the threaded connection of the axle bearing bracket comes loose, smaller components (screws and nuts) may be lost. Furthermore, depending on the severity of the damage, there may be relevant impairments to the driving and braking function (skewing and misalignment) or a lateral offset of the axle. This may lead to an increased risk of accidents. For this reason, we are carrying out a worldwide recall as a precautionary measure.
Remedial Action	Retrofit the missing threaded connections and tighten them to the specified torque.
