Description of Defect, how it came to light, and possible consequences if ignored.	Nissan has identified a condition in which the Lithium-Ion Battery Controller (LBC) may incorrectly diagnose a fault in the battery system. The system may enter fail-safe mode during driving, which restricts motor output and prohibits battery charging. Under certain conditions, such as when regenerative charging occurs, the fail-safe function may cut off the main relay, resulting in a sudden loss of driving power with limited warning, and in the worst case, a vehicle stall.
Remedial Action	Check and LBC reprogram
