Description of Defect, how it came to light, and possible consequences if ignored.	As a result of continuous product monitoring, manufacturer has found that on some cars in case of fuel tank heavily overfilled and particular handling conditions, liquid fuel could reach the carbon canister. If purge valves are reached by fuel this could affect functionality of the fuel EVAP system. EVAP system components faults could cause fuel vapors not treated properly. With not properly treated fuel vapor, particular maneuvers, as example engine over revving at idle, could imply contact between fuel vapor and hot gasses. Especially if combined with a not approved aftermarket exhaust system this could lead to risk of fire.
Remedial Action	Check the EVAP system and replace it if out of standard
