Description of Defect, how it came to light, and possible consequences if ignored.	<p>Vehicles with exhaust tailpipe variants K7D, K7C and K7N, erosion of the seal on the exhaust tailpipe flange may occur as a result of the combination of water with salt.</p> <p>It is possible that if the seal is only partially present or is no longer present, the threaded connection is no longer under tension and the 3 mounting screws will work loose and unscrew due to vibrations. With tailpipe variant K7D, the exhaust tailpipe may fall onto the road if the threaded connection is lost. This could constitute a risk of accident. In the event that the threaded connection is lost, it also cannot be ruled out that the exhaust stream, which is no longer guided, causes thermal damage to adjacent components and therefore constitutes a risk of fire.</p>
Remedial Action	As a precaution, replace the seal on the exhaust tailpipe flange on the affected vehicles with a metal bead gasket.
