ATTENTION FOR CANDIDATES:

This booklet is designed for reference purpose only and has no legal bindings on driving tests. The Driving Services Section of the Transport Department may make certain amendments to it as and when necessary without giving prior notice.

INTRODUCTION

The articulated vehicle driving tests aim at assessing candidate's driving ability, and ensuring that in future the candidate will drive safely and properly, acquire good traffic knowledge and give due consideration to other road users.

The Driving Examiner will carry out the driving test in accordance with the contents of this Guide and will handle situations that are not described here by applying his profound experience and sound judgement in driving.
PART I  TEST VEHICLE AND PARKING MANOEUVRING AREA REQUIREMENTS

Specific Requirements

Candidates who pass their driving tests with test vehicles which do not meet the specific requirements listed below will only be given, upon application, restricted full driving licences allowing them to drive vehicles of the same class but with permitted length that are the same as or less than those of the test vehicles: –

Tractive unit: a specially designed medium goods vehicle.

*Length and Width of Trailer:

- Length: from 6.00 metres to 12.10 metres
- Width: not less than 2.40 metres

Trailers equipped with other special accessories may also be regarded as conforming to our standard. However, candidates should seek prior approval from Driving Services Section of the Transport Department according to individual situation as soon as possible. If the subject trailer could meet the above requirement, it will be issued with a written approval by the Driving Services Section.

General Requirements

Vehicles that do not meet the following general requirements will NOT be accepted for the purpose of driving test: –

(A) The vehicle must be in good mechanical order with the steering wheel fitted to the offside and the handbrake can be easily accessed by the Examiner.
(B) The test vehicle should be insured to cover third party risks (including driving test purpose).
(C) Valid vehicle licence must be displayed on the left of the windscreen of the vehicle and on the trailer as well.
(D) It must be equipped with both the nearside and offside mirrors.
(E) It must be equipped with a gearbox capable of performing at least five forward and one reversing speeds.

Parking Manoeuvring Area and Layout

The Examiner would setup the layout as shown in the Supplementary Sketch and make use of it to brief the candidates about various requirements of the test.

Others

(A) Candidates can use vehicles fitted with automatic transmission (including automatic clutch and pre-selected gearbox types) for the driving test. However, candidates having passed their driving tests with automatic transmission vehicles will be given, upon application, restricted driving licences allowing them to drive automatic transmission vehicles of the same class as the test vehicles used by them.
Handicapped candidates: such as those with impaired hearing, missing or defective limbs, or with walking difficulties, have to be referred by medical officers and to successfully pass a physical test conducted by the Transport Department, before they are allowed to apply for a driving test. For enquiries, please call Driving Services Section at 2713 7262.
Part II TESTING PROCEDURES & OBSERVATIONS

Basic Requirements of the Test

(I) Candidates applying for an articulated vehicle driving test must be either a holder of a valid full driving licence for medium goods vehicle (code 18) or heavy goods vehicle (code 19). In addition, candidates must not be convicted of an offence under Section 36 (Causing death by dangerous driving), Section 36A (Causing grievous bodily harm by dangerous driving), Section 39 (Driving a motor vehicle under the influence of drink), Section 39A (Driving, attempting to drive or being in charge of a motor vehicle with alcohol concentration above prescribed limit), Section 39B (Screening breath tests), Section 39C (Provision of specimens for alcohol analysis), Section 39J (Driving motor vehicle without proper control under influence of specified illicit drug), Section 39K (Driving motor vehicle with any concentration of specified illicit drug), Section 39L (Driving motor vehicle without proper control under influence of drug other than specified illicit drug), Section 39O(1) (Failure to undergo preliminary drug test), Section 39S (Failure to provide specimen of blood or urine) of the Road Traffic Ordinance (Cap. 374) during the 5 years immediately preceding their applications.

Candidates having passed the articulated vehicle driving tests are eligible for endorsing both the full driving licences for articulated vehicle (code 20) and heavy goods vehicle (code 19) if they are holding a medium goods vehicle (code 18) driving licence only. According to Sections 11 and 15 of the Road Traffic (Driving Licences) Regulations Cap.374B, applicant for a full driving licence with commercial vehicle classes must be the holder of a Hong Kong Permanent Identity Card; or the holder of a Hong Kong Identity Card (other than a Hong Kong Permanent Identity Card) and is not subject to any condition of stay other than a limit of stay as defined in section 2(1) of the Immigration Ordinance (Cap.115). For persons who are not of the above residence status, but are required to perform cross border driving duties, please contact Transport Department’s Cross Boundary Unit or Licensing Offices for details.

(II) Candidates for articulated vehicle driving test will have to reach the standards required by the Transport Department in the following :

(A) Candidates must be fully conversant with the "Road Users’ Code";
(B) Candidates should be familiar with the functions and safe manoeuvring of the control of the vehicle;
(C) Candidates should be able to master the following manoeuvres :
   (i) The proper use of gears and accelerator to meet various traffic conditions.
   (ii) The proper judgement of timing, speed and car distance to meet various traffic conditions.
(D) Candidates should also be able to master the following specified manoeuvres :
   (i) Starting the engine of the vehicle;
   (ii) Moving off straight ahead or at an angle;
   (iii) Keeping an appropriate distance from the vehicle ahead;
   (iv) Overtaking vehicles and selecting the appropriate traffic lane to meet the traffic conditions;
   (v) Turning left and right;
(vi) Reversing and parking;
(vii) Stopping and starting on a slope;
(viii) Giving correct signals under appropriate conditions;
(ix) Responding promptly and correctly to people controlling traffic, other road users, traffic signs and traffic lights;
(x) De-coupling and Re-coupling procedures.

Documents and Papers Presented for the Test

Candidates should present the following documents and papers for inspection by Driving Test Centre Officer and Driving Examiner when attending a test:

(a) test appointment letter;
(b) Hong Kong Identity Card or an alternative identity document e.g. passport (previously registered in the Transport Department)*;
(c) learner’s driving licence and valid driving licence (if applicable);
(d) letter of approval for disabled persons (if applicable);
(e) valid Third Party Risks Insurance Certificate in respect of the test vehicle (should also cover driving test purpose)*; and
(f) driving instructor’s licence.

* not be accepted if defaced or expired.

Vision Test

Candidates are required to read at a distance of 23 metres in good daylight (with the aid of spectacles or other corrective lenses, if worn) a motor vehicle registration mark. A candidate who fails his/her vision test will not be allowed to take the test and his/her test form will be invalidated. If he/she wants to take the driving test again, he/she will have to purchase a new test form.
PART III: DRIVING OBSERVATIONS FOR CANDIDATES

Preparation before Moving Off

Before boarding the test vehicle, candidates should walk around it to check that the trailer legs/wheels are wound up and the handle stowed, the air ducts and the electrical connector are properly connected. Before starting the engine, make sure that the handbrake is on and the gear is in neutral position. Adjust the driving mirrors and seat if necessary and put on the seat belt (only applicable to those tractive units manufactured after 1.1.1989 and registered on or after 1.1.1990). Before moving off, check against the readings on the panel, check that there is sufficient air pressure in the storage tanks (only applicable to vehicles fitted with air-brake system). Check against the surrounding traffic conditions, give appropriate signal and move off under safe condition.

Driving Manoeuvres and Control of Speed

Candidates should be fully conversant with the use of various controls of the vehicle in order to handle various road conditions, such as going up and down of slopes, approaching road junctions and roundabouts. Maintain proper coordination of steering wheel, clutch, accelerator and footbrake so as to avoid rolling forwards or backwards during moving off and stopping.

Care should be taken in the control of the speed of the vehicle with the use of proper gear so as to suit the ever-changing traffic conditions. Do not drive too fast when approaching junctions, zebra crossings, pedestrians and objects or when cornering. Under normal traffic conditions, candidates should not dwell in low gears (first or second gear) or drive only at low speed during the test; otherwise, examiners will regard these as serious mistakes and it would eventually lead to a failure. If the road condition ahead is clear and safe, candidates should make use of the proper gear to reach a reasonable speed, but not exceeding the speed limit. However, if the road condition does not permit so doing, candidates should adopt low gear instead and reduce speed for the sake of safety.

Candidates must bear in mind that a fully loaded articulated vehicle if not properly driven would lose control and lead to fatal consequences, particularly when cornering, emergency braking or running down slopes.

Judging Car Distance

Candidates should always keep a safe distance from the car ahead, and bear in mind the 2-second rule. Avoid driving in parallel with other motorists in dual or multiple lanes, try to keep a safe distance from other vehicles or objects when overtaking or stopping.

Overtaking

Candidates should make full use of mirrors before overtaking, observe the rear following vehicles, and/or those vehicles from opposite directions, and signal properly. Make use of the mirrors especially before moving out to ensure safety.
During the process of overtaking, care should be taken to keep a safe distance from the objects ahead and control the speed of the vehicle properly. After overtaking, candidates should return to the original lane if situation permits. Care should be taken not to cut in sharply in front of other vehicles.

**Hazard Recognition**

Candidates should constantly observe the road conditions, so as to act appropriately to road signs, vehicles parked at roadside, pedestrians, junctions, change of road conditions and emergencies.

**Roundabouts and Junctions**

Before entering or leaving roundabouts or junctions, candidates should signal properly, adopt the appropriate speed and correct traffic lane. Observe the "Give Way" and "Stop" signs and yield right to vehicles having the right of way.

Candidates, before reaching the junctions, should control the vehicle properly and to act according to warning, regulatory and informative traffic signs. Select the appropriate lane beforehand, signal properly and make use of the mirrors. Before driving into the junction, candidates may stop at an appropriate position to check traffic conditions from the right, then left and then right again. Only after ensuring a safe traffic condition should candidates drive into the junction. Constant observation of traffic condition from both sides is necessary when passing the road junction and to remain in the right course. Care should be taken to keep the vehicle inside the proper track when cornering. In turning left, the vehicle must not be allowed to touch the kerb or drive on the pavement. In turning right, premature/late steering or returning the steering wheel would lead to right corner cut or deviating from the proper track.

**Traffic Signs / Traffic Lights / Directions of Authorized Traffic Controllers**

Candidates should be familiar with and to obey the traffic signs, and to follow the directions of traffic controllers (including policemen, traffic wardens and members of school traffic safety team). Candidates should also observe the change of traffic lights. If the traffic lights change from green to amber and that the vehicle has passed the stop line, candidates may continue to move on. But if it has already changed to amber and that the vehicle has not yet reached the stop line, candidates should stop the vehicle. However, if the bringing of the vehicle to a sudden standstill would lead to a traffic accident, candidates should carefully continue with their way.

**Traffic Lanes**

Candidates should always keep in left lane. Before reaching a road junction, they should select the appropriate lane for left turning, right turning or going straight ahead. Make full use of the mirrors to check traffic condition and to signal properly in good time before changing lanes. Mirrors checking must be performed prior to steering in order to ensure safety.
The Stopping Rule

Before stopping, candidates should make use of the mirrors to check traffic conditions, signal properly and then pull up near the left side kerb. After stopping, the handbrake should be secured; the gearshift should be moved to neutral position. Before leaving the vehicle, make sure to switch off the engine and engage first or reverse gear as appropriate.

Road Courtesy

Candidates should comply with the Road Users’ Code and be courteous to other road users. When driving a gigantic vehicle, try to avoid using the outer lane; candidates should not make use of the huge size of the test vehicles to force other road users to give way, to brake or to swerve their vehicles in order to dodge them. They should also make constant checks on the mirrors and to keep safety distance with others.

Reversing and Parking Manoeuvres

These manoeuvres are to test the ability of candidates in reversing and parking. The Examiner would set up the field layout as sketched in the Appendix according to the size of the test vehicle, and to place the cones in the correct positions. Candidates have to reverse their vehicles precisely into the designated parking space, which is equal to one and half of the width of the test vehicle, as directed. In the exercise, candidates should demonstrate their adequate observations, any wheel or any part of the vehicle must not touch any cone or kerb, the trailer must not overhang the area of the parking compound; after the parking, the extreme rear of the trailer must be parked within the 1-metre stopping area; and that the entire vehicle must stay wholly inside the parking space, any part of the vehicle must not overhang any boundary lines or kerb and the wheels must not touch any boundary lines or kerbs.

De-coupling and Re-coupling Procedures

Candidates should adopt the following procedures in sequence.

De-coupling

1. Secure the trailer brake;
2. Lower the trailer legs/wheels and stow the handle;
3. Disconnect the electrical connector and the air ducts (close the valve first if any);
4. Disconnect the king pin of the tractive unit;
5. Drive the tractive unit away slowly and smoothly.
**Re-coupling**

1. Check that the height of the trailer is matched with that of the king pin;
2. Reverse the tractive unit slowly and smoothly in the re-coupling position until the unit is secured to the trailer;
3. Make sure that the trailer is properly secured by driving forward the unit a bit;
4. Connect the electrical connector and the air ducts (open the valve if any);
5. Wind up the trailer legs/wheels and stow the handle;
6. Release the trailer brake.

**Oral Test relating to the Braking System**

Candidates will be required to answer safety questions for commercial vehicles relating to the braking system and to demonstrate its operation to the duty examiner when requested. For details of the braking system, please refer to the Appendix to this Guide.

**Gear Changing Exercise**

Under the instruction of the Examiner and within a designated distance, candidates have to demonstrate the skill of gear changing from the lowest gear to high gears (normally from 1st to 5th gear). Then they have to change down one by one in turn until the lowest gear is reached. In the process, the speed driven must cope with the gear used, footbrake may be applied slightly if necessary in order to retard. At the completion of the exercise, candidates should adopt the normal gears in driving.

**Use of Mirrors**

Before any manoeuvring and signalling, candidates should check against the side mirrors first, for example:

1. Moving off and pulling up;
2. Changing directions;
3. Overtaking;
4. Changing lanes;
5. Passing stationary or moving objects;
6. Before acceleration/retardation;
7. Where situation warrants.
Part IV : OTHERS

Test Routes

Under normal conditions, examiners would conduct the test according to the standard test routes designed by the Driving Services Section of the Transport Department. However, in case of road repairs, traffic jam or emergency, test routes may be deviated to meet the traffic conditions.

Dangerous Driving / Inadequate Control

Should a candidate perform any dangerous act, which may endanger other road users during the course of the test, or should he/she prove himself/herself to be in a state of inadequate control over the vehicle, the test may be terminated by the examiner.

Methods of Recording Driving Errors

The mistakes committed by candidates will be divided into minor and serious ones and recorded on the test form by means of a tick against the appropriate item:

- Minor Mistakes
  Minor mistakes refer to those driving faults committed by candidates, they would not endanger other road users or even cause inconvenience to them. Such driving faults would not lead to a fail in the test.

- Serious Mistakes
  Serious mistakes are those which would cause imminent or direct danger; including the driving technique or basic control not up to the stipulated standard of the Transport Department. The driving test system being strict and fair, and if a candidate commits one or more serious mistakes in a driving test, it will be regarded as a fail.

  If a candidate commits minor mistakes against a certain item for three times or more, these mistakes will be accumulated to form a serious mistake and the test will be regarded as a fail.

Test Form and Record of Result

After the test, the original of the Driving Test Form will be endorsed and kept by the duty Driving Test Centre Officer, who will give to the candidate the duplicate of the test form (also known as the "yellow copy"), on which all the mistakes committed by the candidate during the test as well as the test result are recorded.

The result of the candidate will become final only after it has been verified by the Transport Department. However, if the candidate's licence has been suspended by the court during the period of his/her test, the "Pass" result he/she has obtained will be rescinded and the fees paid will not be refunded.
Application for Driving Licence by Successful Candidates and Application for a Second Test by Unsuccessful Candidates

1. Successful Candidates

According to Sections 11 and 15 of the Road Traffic (Driving Licences) Regulations Cap.374B, applicant for a full driving licence with commercial vehicle classes must be the holder of a Hong Kong Permanent Identity Card; or the holder of a Hong Kong Identity Card (other than a Hong Kong Permanent Identity Card) and is not subject to any condition of stay other than a limit of stay as defined in section 2(1) of the Immigration Ordinance (Cap.115). For persons who are not of the above residence status, but are required to perform cross border driving duties, please contact Transport Department’s Cross Boundary Unit or Licensing Offices for details.

Successful candidates please approach one of the Licensing Offices of this department listed below after 7 working days (but not exceeding 3 years), from the date of your test to apply for the issue of a full driving licence, or for an endorsement of the relevant driving entitlements as the case may be. Please bring along with you the following documents: –

1. Hong Kong Permanent Identity Card (original or photocopy); or
2. Hong Kong Identity Card (original or photocopy) and a valid travel document (original and photocopy) to show that you are not subject to any condition of stay other than a limit of stay as defined in section 2(1) of the Immigration Ordinance (Cap. 115); and
3. Original or photocopy of address proof (residential address and correspondence address) issued within the last 3 months (e.g. water/electricity/gas bill and bank correspondence); and
4. The “yellow copy” of test form; and
5. The duly completed application form: Application for Full Driving Licence (TD 557); and
6. The required fee for the issue of a full driving licence (not applicable for driving licence endorsement); and
7. Medical examination report form TD256 duly completed by a registered medical practitioner (applicable to a person aged 70 or above who applies for Full/Probationary Driving Licence)

According to the Road Traffic (Driving Licences) Regulations (Chapter 374B), any candidate who applies for the issue of a full driving licence after 3 years from the date that he/she passed his/her test will not be entertained by the Transport Department.

**Licensing Offices**

</table>
2. **Unsuccessful Candidates**

Unsuccessful candidates can apply to re-take the articulated vehicle driving test 7 working days after the date of their test through the following ways:

- **Online booking for articulated vehicle driving test by visiting the GovHK website** ([http://www.gov.hk/en/residents/transport/drivinglicense/roadtest.htm](http://www.gov.hk/en/residents/transport/drivinglicense/roadtest.htm)). (Note: you must possess a valid personal digital certificate issued by recognised Certification Authorities for authentication; and with a credit card (Visa or MasterCard) or a PPS account number and Internet password for payment.) Please contact the Driving Test Appointment Office at 2771 7723 for enquiries.

- **Submit your application together with the following documents by post to “Shatin Licensing Office, Transport Department, P.O. Box No. 79, Shatin Central Post Office” and mark 《Application for Driving Test (Commercial Vehicle)》 on envelope : –

  1. Copy of Hong Kong Identity Card or other identity document;
  2. Copy of Full Driving Licence;
  3. The duly completed application form: Application for a Driving Test (Commercial Vehicle) (TD 321); and
  4. The required fee for the purchase of the relevant driving test form (please pay by crossed cheque or cashier order, payable to “The Government of the Hong Kong Special Administrative Region”, do not send in cash).

3. **Result of Driving Test**

The result of the driving test as shown on the copy of the test form is subject to final verification by this Department. Should an amendment of the verdict be found necessary in the course of verification, the candidate will receive by post a notice to this effect and he/she will be invited to our office for the purpose of updating the test result.
Appendix - Braking System

Introduction

The braking system can slow down or stop a vehicle while in running or to keep the vehicle at rest when parked on slopes.

The braking force is generated by friction between components which transform the kinetic energy into heat energy and disposed into air. Upon applying the brake, the brake shoes are activated and rubbed against the brake drums and this action generates heat energy which heat up the two braking components. But when the temperature of the brake shoes rises, the braking efficiency lowers. So if the brake is applied when the vehicle is running at high speed, or running down slope for a long distance, or the brakes are applied frequently within a short moment, the efficiency of the brake drops. This phenomenon is called brake fade.

Power-assisted Braking System

When the driver depresses the footbrake, the compressed air is sent to the brake pumps and the braking system is activated. There are different types of warning devices for the low pressure of the compressed air. When the pressure of the compressed air drops (normally less than 4 bars or 60 psi), such warning device will be activated and give warning signals to the driver.

If the warning device is activated in the course of your driving, you must pull up your vehicle as soon as possible at a safe place and check against the braking system until the situation is rectified.

To check for air leakage, you should build up the air pressure to the highest value, and with the engine turning off, find someone to depress the brake for you and then listen for the air leaking noise.

To avoid corrosion of the air tanks as well as to maintain sufficient air pressure in the tanks, the driver must drain the tanks frequently.

Safety Precaution

Before moving off, the driver must ensure that there are sufficient air pressure in the tanks (normally the minimum safety operation pressure is not less than 4 bars or 60 psi).

When driving down slopes, a driver should select a suitable low gear so that the vehicle is driven with the engine brake. Never select neutral and let the vehicle coast down the slope because there will be a loss of speed control and the air pressure cannot be built up at an idling engine rotations.
The Use of Parking Brake (Handbrake)

The parking brake should only be used after the vehicle is parked or in the case of emergency braking when the footbrake is not functioning well. If leakage occurs in the footbrake system resulting in the brake failure, drivers should be able to make use of the parking brake to stop the vehicle, the reason being that the parking brake system is separated from the footbrake system.

Running Down Slopes

The vehicle will automatically accelerate when running down slope due to the gravitational force, resulting in loss of control of the vehicle; the situation becomes exceptionally awkward when the vehicle is fully loaded. Brake-fade will occur due to overheating of brake-shoes if retardation is depended solely on footbrake, therefore, when running down slopes, especially the long ones, drivers should first decelerate, engage the exhaust brake (applicable to those vehicles equipped with this function), and engage low gears to ensure maximum safety.

Use of Exhaust Brake

This is a supplementary engine braking system which makes use of the engine to retard. It can relieve partially the burden of the footbrake to avoid brake fade due to overheating. Generally speaking, when running on level ground or uphill, it is not necessary to activate this brake. However, when running down slopes for a long distance, this brake is quite effective in particular when the vehicle is driven in low gears.

Skilful Driving

Candidates should be fully conversant with the use of various controls so as to handle various road conditions. Candidates should bear in mind that the improper control of a loaded articulated vehicle would lead to fatal consequences – for example, staying in high gears when driving down slopes for a long distance. In this case, the vehicle gains speed and a great momentum will be built up resulting in the vehicle not being pulled up at your estimated time and distance, or “jack-knifing” occurs if the footbrake is applied abruptly.
MANOEUVRING EXERCISE – REVERSING

This exercise commences from a position with the front of the test vehicle in line with marker cones A and A1. The candidate has to reverse the test vehicle into the cone C area, keeping marker cone B on the offside, and stops with the extreme rear of the test vehicle within the 1-metre stopping area.

Distance:

\[
\begin{align*}
A - A1 &= 1 \frac{1}{2} \text{ times the width of the vehicle} \\
A - B &= 2 \text{ times the length of the vehicle} \\
B - \text{Line Z} &= 3 \text{ times the length of the vehicle}
\end{align*}
\]

The width of the cone C area is \(1 \frac{1}{2}\) times the width of the vehicle. The length of the bay is based on the length of the vehicle, plus 1-metre stopping area at the discretion of the examiner.

Revised in November 2014
