

Subsidising the installation of seats and real-time bus arrival information display panels at covered bus stops by franchised bus companies

Purpose

This paper aims to brief Members on the Government's initiative on subsidising the installation of seats and real-time bus arrival information display panels ("display panels")¹ at covered bus stops by franchised bus companies as well as to provide the list of the bus stops to be installed with such facilities by the bus companies and the related installation timetable in Sham Shui Po District.

Background

2. At present, there are about 3 000 covered bus termini², en-route stops and bus-bus interchanges across the territory, of which only about 200 covered bus stops are installed with seats. To help all franchised bus companies³ expedite the installation of seats for the convenience of passengers, especially the elderly and those in need, the Government will subsidise franchised bus companies for installing seats at covered bus stops without seats.

3. Separately, all franchised bus companies have been gradually rolling out their real-time arrival information systems⁴. Currently, KMB and LWB are providing real-time bus arrival information of about 500 regular bus routes to the passengers through their websites and mobile phone applications, whilst other franchised bus companies will introduce the real-time bus arrival information systems gradually by end 2018 so that passengers can know their waiting time and plan their journeys better. In addition to the use of websites and mobile

¹ The Government has earmarked \$88.27 million to subsidise franchised bus companies for installing seats and display panels.

² Bus termini owned by the Government and managed by the Transport Department.

³ Franchised bus companies include Kowloon Motor Bus Company (1933) Limited (KMB), Long Win Bus Company Limited (LWB), Citybus Limited (CTB), New World First Bus Services Limited (NWFB) and New Lantao Bus Company (1973) Limited (NLB).

⁴ Currently, KMB and LWB have developed and applied the real-time bus arrival information systems. Therefore, these two bus companies can arrange installation of display panels immediately. For CTB and NWFB, as their real-time arrival information systems are still under development, it is expected that the real-time enquiry service will cover all their bus routes in 2018. As such, installation of display panels will commence in 2018 to tie in with implementation of the systems. As for NLB, the bus company expects that development of its system will be completed in the first quarter of 2017 and installation of display panels will commence thereafter.

phone applications, individual franchised bus companies are also providing real-time bus arrival information through display panels installed at some of their covered bus stops with electrical installation. This has generally been well-received by passengers. As the installation of display panels involves considerable capital and recurrent expenditure and may exert pressure on bus fare, the Government will provide subsidy to franchised bus companies for their installation of display panels at covered bus stops with electrical installation on a matching basis⁵.

4. Due to physical and technical constraints, not all covered bus stops are suitable for installation of seats and display panels. After discussing with franchised bus companies and relevant government departments, the Transport Department has formulated the following screening criteria for identifying the bus stops to be installed with seats and display panels:

- (a) Bus stops with shelters (and, for installation of display panels, equipped with electrical installation);
- (b) A minimum 1.5 metre wide passageway is preferably to be maintained on the footpath after the installation of seats to allow passage of the elderly, the disabled and wheelchair users; and
- (c) Bus stops that are mainly used for boarding instead of alighting.

5. For sites that are free from any physical and technical constraint, bus companies will install seats and display panels at their bus stops which meet the above criteria. However, as there are large number of bus stops that need to be installed with such facilities by individual bus company i.e. KMB, installation work will be carried out in phases. In this connection, KMB will rank the priority of the installation work based on the following objective factors:

- (a) First priority: bus stops near hospitals or general out-patient clinics;
- (b) Second priority: bus stops with bus service at a frequency of 20 minutes or more; and
- (c) Other priorities: bus stops with greater number of boarding passengers.

In drawing up the timetable for the bus stops to be installed with such facilities, we will also see whether any sub-areas are lacking in such facilities.

⁵ The Government will provide subsidy for the installation of an additional display panel on a matching basis, which means that for every display panel which a franchised bus company has installed, the Government will provide subsidy for the installation of another display panel.

Installation timetable

6. We plan to take forward the installation work in the 18 districts simultaneously. According to our initial estimation, LWB and NLB should be able to complete the installation of seats and display panels at their suitable bus stops (mainly located in Lantau) in 2017. For CTB and NWFB, the seat installation work can be completed in 2017 (mainly on Hong Kong Island). As for the installation of display panels, the work will commence upon the development of the bus companies' real-time enquiry service covering all bus routes in 2018. Regarding KMB, as there are large number of suitable bus stops in Kowloon and the New Territories, installation of seats and display panels will be undertaken in phases starting from 2017 and the whole project is expected to be completed by 2019⁶.

7. With reference to the screening criteria and ranking priority as mentioned in paragraphs 4 and 5 above, the bus companies have drawn up the timetables for the installation of seats and display panels under the Government's Subsidy Scheme⁷ and that for Sham Shui Po District is shown in **Annex 1** attached. A list of bus stops already equipped with such facilities is attached at **Annex 2** for Members' information.

8. Members are invited to note the arrangements for subsidising the installation of seats and display panels at covered bus stops by franchised bus companies.

Transport Department
January 2017

⁶ As the design of covered bus termini varies and the space for passenger queuing is limited, bus companies may need to explore the design option and installation method for each bus terminus having regard to the respective physical and technical constraints, and applications to relevant Government Department may be required. The bus companies will carry out the study in 2017 and installation works are expected to commence in 2018 for completion in 2019.

⁷ The franchised bus companies will continue to erect bus shelters at suitable locations and will provide seats and display panels (if electrical installations are provided) at their newly built covered bus stops, and subsidy will not be granted by the Government for provision of such facilities.
