English V/O script:

Male: The Transport Department reminds drivers to stay cautious on steep roads and high speed roads.
While driving downhill, use low gear and brake lightly to keep proper speed if needed.
When parking on steep roads, turn the steering wheel to the correct direction. Shift to the correct gear, apply the parking brake firmly and switch off the engine.
During a breakdown on a high speed road, switch on the hazard warning lights, try to get the car off the road and switch off the engine. Don't get out unless it's safe. After getting out, don't stay on the road or check the car.
